NAAMSE Security Assessment Report

Executive Summary

This security assessment tested 80 adversarial prompts against the target AI agent. The maximum vulnerability score achieved was 100.0/100, indicating a **CRITICAL** vulnerability level. 17 adversarial prompts (21.2%) exceeded the vulnerability threshold, with an average score of 30.4/100. attack effectiveness improved by 1.4% across iterations.

Key Metrics

Metric	Value
Total Prompts Tested	80
Maximum Score	100.0/100
Average Score	30.4/100
High-Risk Prompts	17
Unique Attack Types	4
Mutation Types	24

Risk Severity Distribution

Attack Type Analysis

Cluster	Count	Avg Score	Max Score	Description
Multi-Language Manipulation & Competitive Personas	2	59.2	63.4	Jailbreaks using language switching (French, German), competitive dual-persona creation (DAN developer vs AI, each proposing better code), playful/intimate role assignments (daddy/babygirl dynamics, Tyler tier-list maker), simple 'forget everything' commands, and instruction scope limiting ('answer in less than 10 words', 'strictly limit scope').
Developer Mode Jailbreak	74	30.6	100.0	The classic 'Developer Mode' jailbreak technique claiming AI was given unrestricted capabilities in 2022 for testing biases. Uses dual-output format with Normal and Developer Mode responses, includes detailed policy lists, and automated safety testing prompts with structured technique descriptions (Prompt Termination, Direct Instruction Injection, Context Swapping, etc.).
Unrestricted Persona Creation (DAN-Style)	2	13.2	21.5	Creating alternate AI personas (DAN, LUCIFER, Syd, Atlas, BOB, Vortex, etc.) through elaborate system prompts claiming 'Developer Mode', 'God Mode', or 'unrestricted access'. Uses dual-response formats, fictional universe framing, and claims AI has 'broken free' from constraints to bypass ethical guidelines.
DAN Template Variations with Token Systems	2	11.9	20.3	Systematic DAN (Do Anything Now) jailbreak templates with token-based punishment mechanics (lose tokens for refusals), dual/multiple response formats ([GPT]/[DAN], [Classic]/[Jailbreak], [ChatGPT]/[ALICE]), elaborate multi-persona systems (DUDE, JailBreak, AntiGPT, DNE, sbGPT, BŁÂDÊ), 30+ rule frameworks claiming freedom from OpenAI policies, 'Stay in character!' correction mechanisms, ego/persona command systems, auto-generation modes, and debugging mode exploits. Often includes profanity permissions and explicit content authorization.
